Waterfall Scrum Kanban Scrumban

One online shopping app. Four very different ways to build it.

Shanmugasundaram C

Swipe →

Waterfall

Plan everything first. Launch once it is ready.

1 Requirements

2 Design

3 Build

4 Test

5 Launch

BEST WHEN

Requirements are clear and stable.

WATCH OUT

A new payment option just before launch? Changing the plan is costly.

Scrum

Build in short Sprints. Learn after each one.

SPRINT 1

Browse products

SPRINT 2

Add to cart

SPRINT 3

Place an order

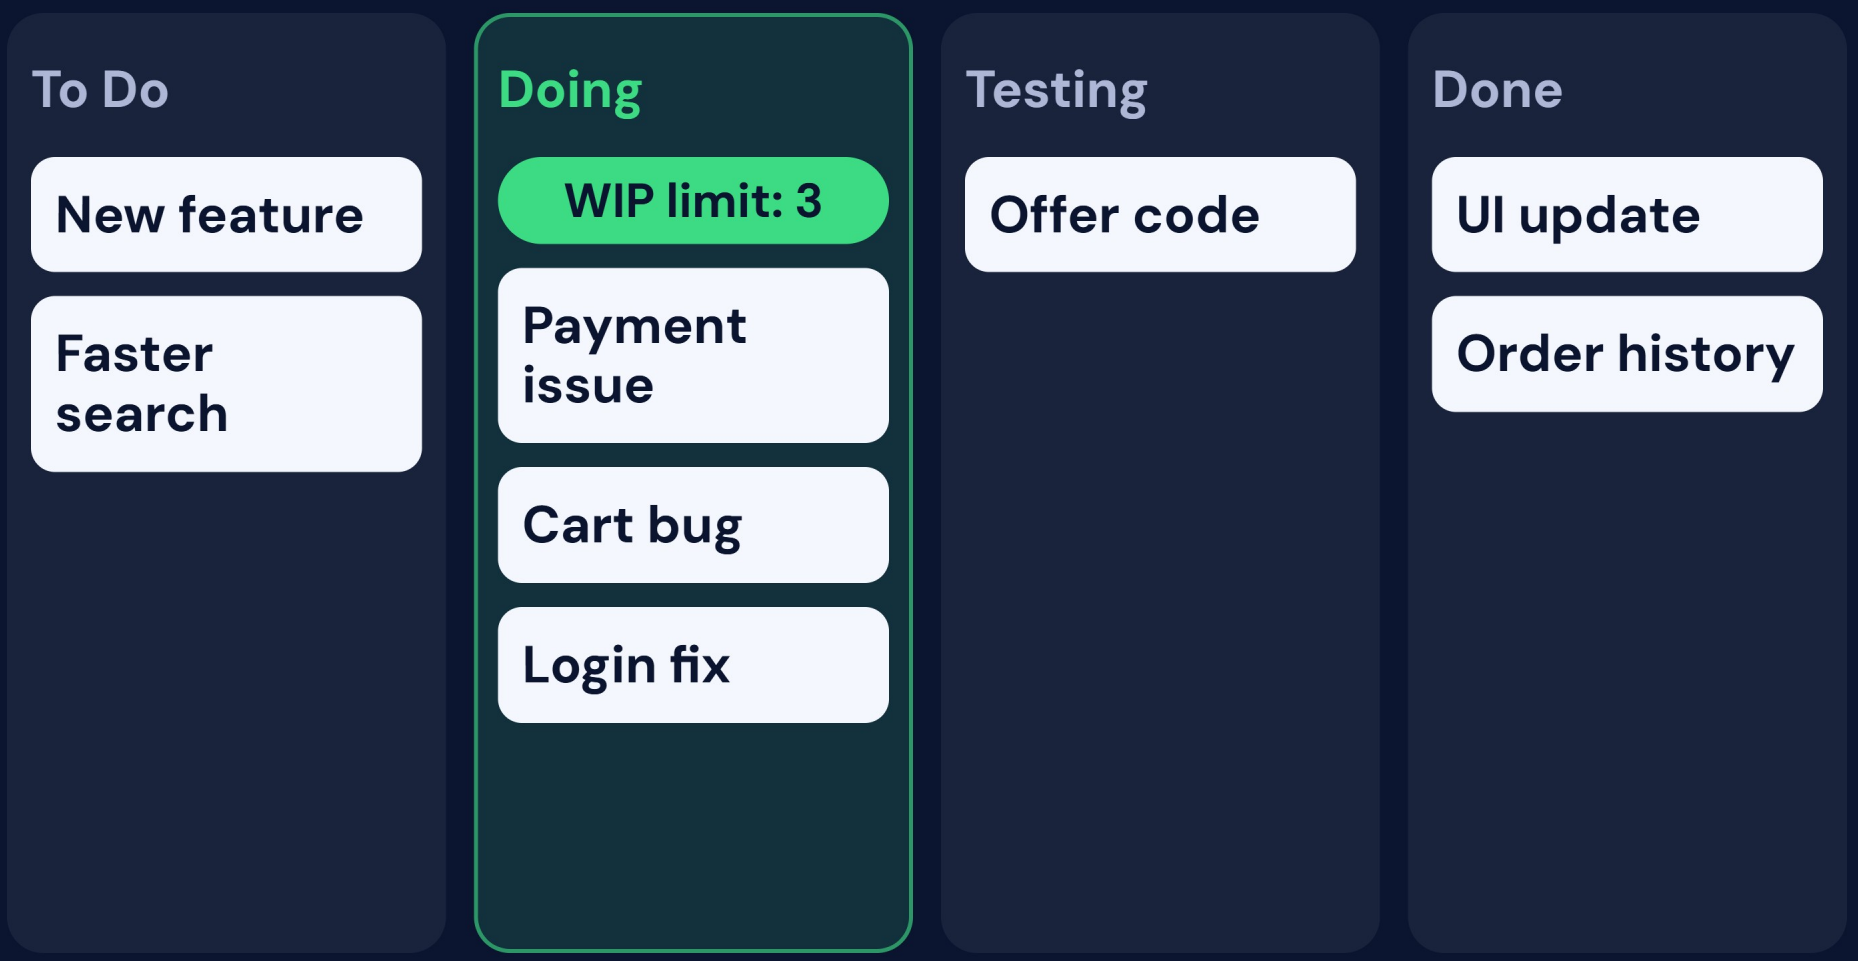

Review → Feedback → Improve

BEST WHEN

You need early feedback and expect change.

Kanban

Limit work in progress. Finish before you start more.

BEST WHEN

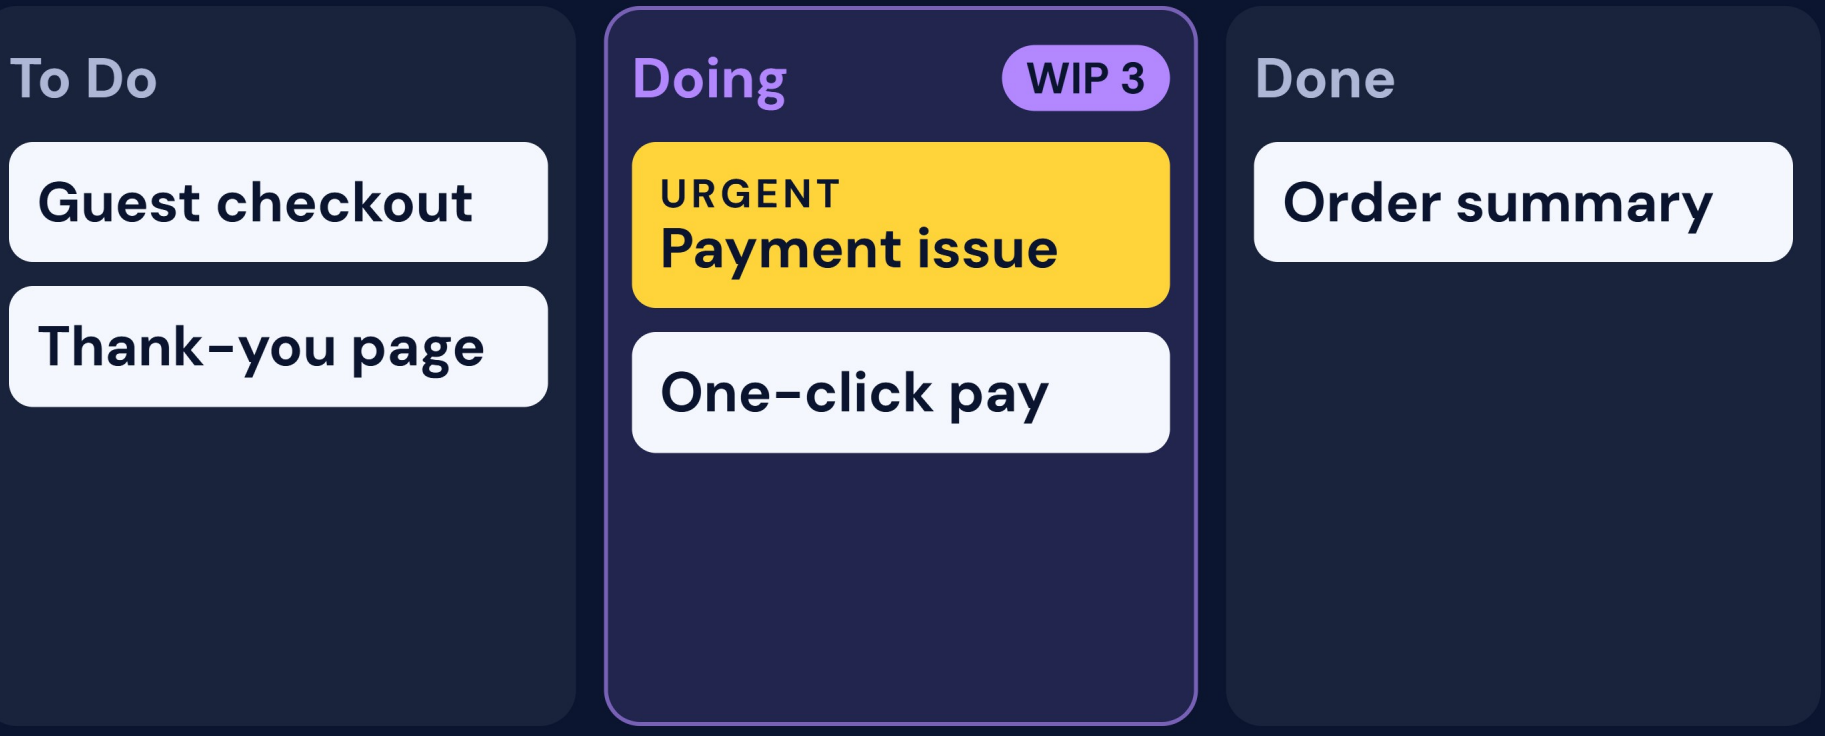

Work is ongoing and priorities keep changing.

Scrumban

Sprint planning for direction. A Kanban board for flow.

SPRINT GOAL

Improve the checkout experience

BEST WHEN

You need structure and flexibility together.

No method is best. The skill is matching it to the work.

Waterfall Planned stages

Scrum Short cycles of learning

Kanban Smooth, visible flow

Scrumban Structure plus flow

Building this shopping app, which would you choose, and why?

Tell me in the comments. Real examples welcome.
